ABOUT ME

I enjoy solving technical problems and helping organisations adopt modern technologies through software development, platform migrations, and intelligent automation. Currently, I work on OFX's global support team, assisting with client migrations to an updated platform through technical support, system management, and issue resolution. I also contribute to the training and optimisation of our Enterprise AI platform, helping improve how information is gathered, investigated, and routed to the right teams.

My previous experience includes developing API integrations for customers and partners, supporting the retirement of legacy systems, and contributing to the migration of applications to modern platforms. I am always looking for opportunities to expand my technical knowledge and continue to grow in software engineering, emerging technologies, and AI-driven solutions.
